KEITH STRANGE
VICE PRESIDENT, PURCHASING AND MATERIALS

## SUBJECT: Management Advisory - Postal Service Supplier Demographics

 (Report Number CA-MA-02-001)This report presents the results of our review of the Postal Service's Supplier Demographics (Project Number 00RA010CA001). This review was self-initiated as part of a request from the Governors to review the Postal Service Supplier Diversity Program. This is the third report addressing supplier diversity. Our primary objective was to determine if Postal Service minority-owned and woman-owned supplier statistics were consistent with national business supplier diversity statistics at the ethnic group level.

We were unable to determine if the Postal Service's minority-owned and woman-owned supplier statistics were consistent with national business supplier diversity statistics at the ethnic group level because minority-owned supplier contract records did not always include ethnic level data. Therefore, we conducted our review on the overall categories of minority-owned and woman-owned businesses. These results showed the Postal Service was generally consistent with national business demographics regarding the total percentage of dollars awarded. However, the Postal Service was not consistent with national business demographics regarding the percentage of minority-owned and woman-owned suppliers awarded contracts.

We recommended management require contracting officers to input ethnic codes for minority-owned suppliers in procurement databases and use national business demographics data as a tool when assessing diversity of its supplier base and identifying market opportunities. Management agreed with our recommendations but questioned the accuracy of Postal Service dollars and number of suppliers used, and the methodology used in the comparative analysis. We pointed out that the dollars and number of suppliers used in our analysis were derived from Postal Service procurement databases and that the comparisons were appropriate. Overall, management's corrective actions are responsive to our recommendations. Management's comments and our evaluation of these comments are included in this report.

The Office of Inspector General (OIG) considers recommendation 1 significant and, therefore, requires OIG concurrence before closure. Consequently, the OIG requests written confirmation when corrective action(s) are completed. This recommendation should not be closed in the follow-up tracking system until the OIG provides written confirmation that the recommendation can be closed.

We appreciate the cooperation and courtesies provided by your staff during the review. If you have any questions, please contact Lorie Siewert, director, Contracts and Facilities, at (651) 855-5856 or me at (703) 248-2300.

## EXECUTIVE SUMMARY

| Introduction | At the request of the Board of Governors, the Office of <br> Inspector General (OIG) reviewed different aspects of the <br> Postal Service Supplier Diversity Program and made <br> recommendations for improvement. This review was self- <br> initiated as part of the overall request from the Governors to <br> review the Postal Service Supplier Diversity Program. |
| :--- | :--- |
| This is the third report addressing supplier diversity. The |  |
| primary objective of this audit was to determine if Postal |  |
| Service minority-owned and woman-owned supplier |  |
| statistics were consistent with national business supplier |  |
| diversity statistics at the ethnic group level. |  |

| Summary of <br> Recommendations | We recommended management require contracting officers <br> to input ethnic codes for minority-owned suppliers in <br> procurement databases and use national business <br> demographics data as a tool when assessing diversity of its <br> supplier base and identifying market opportunities. |
| :--- | :--- |
| Summary of | Management agreed with all of our recommendations but <br> did not agree with all of our findings and conclusions. <br> Comments |
| Management questioned the accuracy of Postal Service <br> dollars and number of suppliers used in our comparisons. <br> In addition, management did not believe the comparison <br> with national business demographics to be appropriate <br> because the OIG did not adjust the statistics for firms with <br> few or no employees. Management's comments, in their <br> entirety, are included in Appendix F of this report. |  |

## Overall Evaluation of Management's Comments

Management's actions, planned or taken, are responsive to our recommendations and should correct the issues identified in the findings. We disagree with management's assertions regarding the accuracy of the data and the methodology used for the comparisons. The dollars and numbers of suppliers used in our analysis were derived from Postal Service procurement databases. Additionally, comparison with national business demographics was appropriate. To be comparable, we did not adjust national business demographics for few or no employees because we could not do the same for Postal Service data.

## INTRODUCTION

| Background | The Department of Commerce, United States Census <br> Bureau Economic Census is the major source of facts about <br> the structure and functioning of the nation's economy. It <br> provides essential information for government, business, <br> industry, and the general public. Some uses of the data <br> include locating potential markets, analyzing performance, <br> and keeping informed of market changes. It reported that <br> minority-owned businesses grew more than four times as <br> fast as United States businesses overall between the <br> years 1992 and 1997, ${ }^{1}$ and the number of woman-owned <br> firms increased 16 percent between 1992 and 1997, almost <br> triple the rate for all United States businesses. ${ }^{2}$ |
| :--- | :--- |

The Postal Service places value in doing business with minority-owned and woman-owned businesses. According to the Postal Service Supplier Diversity Plan, if the Postal Service is going to succeed, it must take full advantage of all resources available. The plan recognizes that minority and woman-owned suppliers are driving the growth in the American economy, and in doing so, many of these suppliers use the Postal Service as their carrier of choice. The plan also recognizes minority-owned and womanowned suppliers' growth may mean additional revenues for the Postal Service. ${ }^{3}$

## Objectives, Scope, and Methodology

Our primary objective was to determine if Postal Service minority-owned and woman-owned supplier statistics were consistent with national business supplier diversity statistics at the ethnic group level.

First, we extracted all fiscal year (FY) 2001 minority contract records from Postal Service's Facilities, Supplies, Services, and Equipment, and Highway Transportation Purchasing systems to determine if the records contained ethnic codes. We found ethnic level data did not always exist. As a result, we conducted the review on the overall categories of minority-owned and woman-owned businesses.

To continue the review on minority-owned and womanowned businesses, we obtained, compiled, sorted, and

[^0]compared Postal Service FY 1999 contract data ${ }^{4}$ to national business demographics data from the Department of Commerce Economic Census.

We conducted analyses by state, Postal Service area, and industrial sector for two diversity groups: women and minorities. For each combination of analysis group and diversity group, we calculated the ratio between Postal Service diversity group suppliers and Postal Service total suppliers. We also calculated the corresponding ratio for national business demographics suppliers. For each combination, we compared the Postal Service ratio to the national business demographics ratio to determine if the Postal Service minority-owned and woman-owned supplier statistics were consistent with national business supplier diversity statistics. Our detailed methodology is in Appendix A. Data and resulting ratios are included in Appendices C, D, and E.

We conducted this review between August 2001 and March 2002 in accordance with the President's Council on Integrity and Efficiency, Quality Standards for Inspections. We discussed our conclusions and recommendations with appropriate management officials and included their comments, where appropriate.

## Prior Audit Coverage

On September 30, 1998, the Office of Inspector General (OIG) issued a report on Supplier Diversity and Minority Contracting (Report Number CA-MA-98-003) that examined Postal Service contracts with minority businesses. The review disclosed: (1) the Postal Service did not enforce its requirement that contractors submit subcontracting plans that encourage and include minority contracts; (2) the Postal Service did not meet FY 1998 supplier diversity targets for minority contract awards; (3) minority contract awards declined from FY 1994 to 1995, increased from FY 1995 to 1996 and then declined again from FY 1996 to 1997; and (4) the Postal Service did not address all supplier diversity recommendations from the Aguirre International Study. Management generally agreed with the findings and took

[^1]adequate corrective actions. The Postal Service indicated all recommendations from the Aguirre International Study were addressed; however, they did not adopt all of the recommendations.

On September 6, 2001, the OIG issued an audit report on the Supplier Diversity Program for Supplies, Services, and Equipment Purchases (Report Number CA-AR-01-005). This audit assessed the reliability of FY 1999 supplier diversity statistics for supplies, services, and equipment purchasing and Postal Service effectiveness in achieving its supplier diversity spending plan. The audit disclosed supplier diversity statistics for FY 1999 were unreliable and the Postal Service was not always effective in achieving its supplier diversity spending plan. Management generally agreed with the recommendations and stated they were taking corrective actions.

## AUDIT RESULTS

> Minority-owned Supplier Contract Records Did Not Always Include Ethnic Level Data

Minority-owned supplier contract records did not always include ethnic level data. Specifically, about 50 percent of minority-owned supplier contract records in the Facilities and Supplies, Services, and Equipment Systems did not include ethnic codes. (See Appendix B)

Section 3.2.4 of the Purchasing Manual states purchases made from small, minority, and woman-owned businesses must be coded by socioeconomic classification, which includes ethnic classification. However, Postal Service contracting officers did not always input ethnic level data for minority-owned suppliers in procurement database records. This occurred because Postal Service policy does not specifically require contracting officers to input these codes in the procurement databases. Further, Postal Service Strategic National Automated Purchasing System (SNAPS) and Facilities Management System for Windows (FMSWIN) do not have edit checks that would prevent entry of a minority-owned supplier contract record without the ethnic code.

As a result, the Postal Service cannot assess its supplier base against business demographics changes at the ethnic level and thus, may not be taking full advantage of opportunities to increase revenue from minority-owned businesses.

The Postal Service plans to correct this problem in its April 2002 upgrade to the Strategic National Automated Purchasing System. However, the Postal Service does not have immediate plans for any system enhancements to correct this problem in the Facilities Management System for Windows.

## Recommendation We recommend the vice president, Purchasing and

 Materials:1. Require contracting officers to input ethnic codes for minority-owned suppliers in procurement databases.

| Management's | Management agreed with our recommendation. They <br> stated that current policy clearly calls for entry of this data. <br> Comments |
| :--- | :--- |
| They also stated they would remind contracting personnel of <br> this requirement via the Purchasing and Materials electronic |  |
|  | newsletter. They will also verify these codes are mandatory |
| fields in the Supplies, Services, and Equipment, Facilities, |  |
| and Transportation purchasing systems. They will also |  |
| request as applicable, edit checks be added to these |  |
| purchasing systems. These actions will take place within |  |
| 60 days following receipt of the final report. |  |

| Evaluation of | Management's comments are responsive to our |
| :--- | :--- |
| Management's | recommendation. Although the OIG does not agree that <br> current policy clearly requires entry of this data in the <br> Comments |
|  | procurement systems, the actions planned should correct <br> the issues identified in the finding. |

> Supplier Base Not Consistent With National Business Demographics for Number of Suppliers

Although the Postal Service was consistent with national business demographics regarding the total percentage of dollars awarded to minority-owned and woman-owned suppliers, it was not consistent with national business demographics regarding the percentage of minority-owned and woman-owned suppliers awarded contracts.

Dollars Awarded

As shown in Table 1.1, at the national level minority-owned and woman-owned businesses receive about the same percent of dollars from the Postal Service as they receive from the United States business population.

Table 1.1
National Level Analysis for Dollars Awarded

|  | Minority Owned Business |  | Woman Owned Business |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Dollars | Percent to Total | Dollars | Percent to Total | Dollars |
| Postal Service | \$286,511,430 | 3.49\% | \$265,420,961 | 3.23\% | \$8,220,590,821 |
| Nat'I Business Demographics \$(000) | \$591,259,123 | 3.19\% | \$818,669,084 | 4.41\% | \$18,553,243,047 |
| Delta Percentage |  | 0.30\% |  | -1.18\% |  |

Although we identified certain opportunities for improvement (refer to Appendices C, D, and E for variances), the Postal Service was generally consistent with national business demographics at the state, Postal Service area, and industrial sector levels.

Number of Suppliers As shown in Table 1.2, at the national level the percentage of minority-owned and woman-owned businesses awarded Postal Service contracts varied significantly when compared to national business demographics. Specifically, the Postal Service contracted with 5.8 percent fewer minority-owned businesses as a percent of total suppliers than the United States business population. Further, the Postal Service contracted with 13.7 percent fewer woman-owned businesses as a percent of total suppliers than the United States business population.

Table 1.2
National Level Analysis for Number of Suppliers

|  | Minority Owned Business |  | Woman Owned Business |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Suppliers | Percent to Total | Suppliers | Percent to Total | Suppliers |
| Postal Service | 1,636 | 8.72\% | 2,310 | 12.31\% | 18,764 |
| Nat'l Business Demographics | 3,039,033 | 14.60\% | 5,417,034 | 26.02\% | 20,821,934 |
| Delta Percentage |  | -5.88\% |  | -13.71\% |  |

Analyses at the state, Postal Service area, and industrial sector levels for the number of minority-owned businesses disclosed significant variances between the percentages for Postal Service and national business demographics. Specifically:

- Twelve states ${ }^{5}$ showed variances ranging from 6 percent to more than 18 percent (see Appendix C).
- Two Postal Service areas, Pacific and New York Metro, showed variances of 12.6 percent and 19 percent respectively (see Appendix D).
- Three industrial sectors showed variances ranging from 5 percent to 10.7 percent (see Appendix E).

For the number of woman-owned businesses, we found significant variances between the percentages for Postal Service and national business demographics. Specifically:

- Forty-five states ${ }^{6}$ showed variances ranging from 5.1 percent to 22.2 percent (see Appendix C).
- Nine of the ten Postal Service areas showed variances ranging from 6.3 percent to 17.5 percent (see Appendix D).
- Four industrial sectors showed variances ranging from 5.4 percent to 22.8 percent (see Appendix E).

[^2]
#### Abstract

We also noted the Postal Service did not use national business demographics data as a tool when assessing diversity of its supplier base and identifying market opportunities. As a result, the Postal Service cannot assess its supplier base as business demographics change within the American economy.

National business demographics data could assist the Postal Service in assessing its minority-owned and womanowned supplier representation and foster opportunities to maintain or increase revenue from these sources. According to the Postal Service Supplier Diversity Plan many of these suppliers use the Postal Service as their carrier of choice. Therefore, under representation of these suppliers may impact Postal Service opportunities to increase or maintain revenues.

During an audit, Postal Service management advised us that many of the minority-owned and woman-owned businesses included in the 1997 national business demographics may be too small to have the capability to meet the needs of the Postal Service at the prime contract level. Postal Service management believes there may be opportunities for these suppliers at the subcontract level.

## Recommendation We recommend the vice president, Purchasing and Materials:

2. Use national business demographics data as a tool when assessing diversity of its suppliers and identifying market opportunities.

## Management's Comments

Management agreed that national business demographic data is valuable and may be useful in efforts to identify market opportunities. In addition, management agreed with our recommendation and has begun to use this data in overall diagnostics. However they do not believe that the data is particularly useful in "sourcing" particular buys and is probably less effective than the methods that are used now. Management also questioned the accuracy of Postal Service data used and the appropriateness of comparing Postal Service data to national business demographics without adjusting the national business demographics data to exclude firms with few or no paid employees.

#### Abstract

Evaluation of Management's Comments

Management's comments are responsive to our recommendation. Although management acknowledged the usefulness of national business demographics data and agreed with our recommendation, we disagree with management's assertion that the dollars and numbers of suppliers used in our analysis are inaccurate because the dollars and numbers of suppliers used in our analysis were derived from Postal Service procurement databases. Regarding the appropriateness of comparing Postal Service data to national business demographics without the adjustments, we could not adjust Postal Service data to exclude firms with few or no paid employees. Therefore, in order to ensure an accurate comparison, we did not adjust national business demographics data.

## APPENDIX A. METHODOLOGY

## National Business Demographics

We categorized all United States businesses by minority and nonminority status and gender of business owners. We extracted the total number of all businesses, total revenue across all businesses, and total revenues for woman-owned businesses and minority-owned businesses from the Department of Commerce, United States Census Bureau, Economic Census 1997-Survey of Minority and Woman-Owned Business, C1-E97-NA2D-17-US1, Disc 2D CD-Rom. ${ }^{7}$ We excluded Guam, Puerto Rico, and the United States Virgin Islands from national business demographics because that information is not reported by gender. Total nonminority businesses and dollars represent the difference between total universe (all United States businesses) or dollars and total minority-owned businesses or dollars, respectively.

- National Business Demographics by State. All national business demographics as described above were analyzed for each of the 50 states, the District of Columbia, and the United States as a whole.
- National Business Demographics by Postal Service Area. All national business demographics as described above were analyzed for each of the ten Postal Service areas $^{8}$ and for the United States as a whole. Because the United States Census Bureau does not group data by Postal Service areas, we had to merge Census Bureau national county data with data from the Postal Service Address Information System CD-Rom using the key (common factor) of county name and state to find their respective ZIP Codes. Then, national business demographics for each county were categorized into ZIP Codes that corresponded to the ten Postal Service areas. We verified counties that were identified in two Postal Service areas and assigned them to the correct area. ${ }^{9}$ Finally, we summarized the data by Postal Service area using Statistical Analysis Software.
- National Business Demographics by Industrial Sector. All national business demographics as described above were analyzed for each of nine industrial sectors (Agriculture, Construction, Manufacturing, Transportation, Wholesale Trade, Retail Trade, Finance, Service, and Not Classified) and for the United States as a whole. These sectors were based on one-digit Standard Industrial Classification Codes.

[^3]
## Postal Service Supplier Demographics

We used FY 1999 contract data and categorized all Postal Service suppliers by either minority or nonminority status and gender of business owners based on Postal Service classification of socioeconomic status. The total number of all suppliers ${ }^{10}$ and total Postal Service dollars awarded across all suppliers were calculated for each possible business combination (minority-female-owned business, minority-male-owned business, nonminority-female-owned business, and nonminority-maleowned business). In addition, summaries were provided for each business combination. The data presented within this report has been aggregated from four separate Postal Service purchasing groups (Supplies, Services, and Equipment; Facilities; Transportation; and local purchases paid via credit card) and consist of FY 1999 contract data. Transportation purchasing data is separated as water, air, highway, and rail categories. ${ }^{11}$ In all analysis group comparisons the number of suppliers in local purchases paid via credit card was excluded from the total number of Postal Service suppliers.

- Postal Service Supplier Demographics by State were analyzed for each of the 50 states, the District of Columbia, and for the United States as a whole.
- Postal Service Supplier Demographics by Postal Service Areas were analyzed for each of the ten Postal Service areas and the United States as a whole.
- Postal Service Supplier Demographics by Industrial Sector described above were analyzed for six of the nine industrial sectors (Construction, Manufacturing, Transportation, Wholesale Trade, Retail Trade, and Service) and for the United States as a whole. We excluded Agriculture and Finance because the Postal Service did not have any suppliers in these categories. The not classified category was not a meaningful comparison in this report. The six industrial sectors analyzed were based on one-digit Standard Industrial Classification Codes. ${ }^{12}$

[^4]
## APPENDIX B. ANALYSIS OF MINORITY ETHNIC CODE USAGE

Data contained in this table was extracted from Facilities (FMSWIN), Supplies, Services, and Equipment (SNAPS), and Transportation Highway (HCSS) procurement databases after the end of FY 2001.

## State Minority Dollars

| FY 2001 Minority Ethnic Code Usage |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| System | Total Records | Minority Records | Minority Records w/o codes | Percentage ot Minority Records w/o Ethnic Codes | Nonminority <br> Records with <br> Ethnic Codes |
| FMSWIN | 7,769 | 553 | 312 | 56.42\% | 0 |
| SNAPS | 10,560 | 835 | 405 | 48.50\% | 55 |
| HCSS | 4,160 | 521 | 9 | 1.73\% | 7 |

## APPENDIX C. COMPARISONS BY STATE

|  | Postal Service |  |  |
| :---: | :---: | :---: | :---: |
| State | TOTAL SUPPLIER \$ | TOTAL MINORITY SUPPLIER \$ | PERCENT MINORITY |
| ALASKA | \$14,241,847 | \$8,071,842 | 56.68\% |

# APPENDIX F. MANAGEMENT'S COMMENTS 

Preexamine:

## UNITEDSTATES

POSTAL SERVICE

March 22, 2002

JOHN M. SEEBA
ASSISTANT INSPECTOR GFNFIZAl
-OR FINANCIAL MANAGEMENT
THRU: KEITH STRANGE

§JB.JECT: Draft Management Advisory-Postal Service Supplier Demographics (Report Number CA-MA-n2-DRAFT)

Thank you for the opportunity to respond to the subject management advisory report. We were pleased that the Office of the Inspector General (OIG) found, in lookirg at FY 1999 statistics, that the Postal Service was generally consistent with national business demographics regarding the total percentage of contract dollars awarded to rinorily and wo min dwnec suppliers. Witt our contint:ec, focus on strategic sourcing and supply chain management, we were not surprised with the results related to the number of contracts awarded.

The attached includes our response to the report's findings and recommendations. We do not oe : $\theta$ ye your report contains any proprietary or bus res information. If you have any questions gaul this response, please contact Marie Martinez at (202) 268-4117.

ATTACHMENT<br>Management Response<br>OIG Report CA-MA-02-DRAFT<br>Postal Service Supplier Denographics

## Finding: Minority-owned Supplier contract Records Did Not Always Include Ethnic Eevel Data

## Comments on Findings and Conclusions

As pointed out by the Office of the Inspector Genera (OIGj, the Purchasing Manual requires thet purchases made from small, minority and women-owned businesses must be coded by socideconomic elessification. Further, a Purenasing Manual exhibit details these classification codes and minor ty ethric classifications.

## Recormimeridation

1. Require contracting officers to input ethnic codes for minority-owned suppliors in procurement delabases.

Management agrees with this recommendation. While existing Purchasing Manual clearly calls for entry of this data, and our systems now accommocate such entries, contracting personnel will be reminded of the requirement to code purcinases with small, minority and wornen-owned businesses by approprizte socloeconomic classification code through a Purchasing and Materials electronic rewsletier (CustomerLink). A request will also be sent to the Manager, Supply Chain Management Systems Porfolio to verify that these codes are mandatory tielcs in our Suppl es, Services and Equipment, Facilities, and Transportation purcרasing systerms. Wie will alse reguest that as applicable, edit cleecks be added to insure data entry and to promote data integrity and accafacy. These ac:ions wil be taker wilhin 60 days following receipt of the final OIG report.

Finding: Supplier Base Not Consistent with National Business Demographics for Number of Suppliers

## Comments on Findings and Conclusions

1he OIG ${ }^{\text {ron }}$ ound that the dollars (FY 99 commitled collars) thet went directly to minority and woman-owned firms were generally in line with the portion of total annual revenues that go to mir ority and woman-quned firms as indicaled in Ite Census Bureau's analysis of the 1997 Economic Census data.

The OIG then found that the number of discrete minority and woman-owned firms receiving contracts curing FY 1999, in proportion to our overall supplier base, fell short of reflecting the ratio of such suppliers to the overall number of tirms in the United States. We will discuss this finding in more detail infra, in the Appendix 1 to this response. We can here note that we do not corsider thet disparity to be surprising or very signif cant. According to the Census Buread data, nearly $75 \%$ of the 20.8 million firms in the Unitod States have no employepes al all: and of the remaining 5 million. two thirds have fewer thar five employees. These are very small firms by virtually any standard. In all probability, such firms will not have either the capabilities or reach to meet Postal Service needs. The ${ }^{\text {Olg, a }}$, at page 7 of the report, noted our comment on $\mathbf{t h i s}$ point.

Since many of our suppliers nold multiple contracts, dollars and transactions going to minority and woman-owned firms, and the percentage of such as a furction of our total dollars and total contracts may be a more accurate indicator. In saying that, we should no:e that we did, this year. adopt a new metric -- the number of discrete suppliers (and discrete small, minority and woman-
owned suppliers) that make up our supplier base. We think that this now motric will be valuathle, and will complement those we have used r.storically. However, we think it will be of limited value as a comparator to national Economic Census statistics.

Whe view our supplier diversity program, in pa'l, as an iniliative to insure that we can have some insight as to how, and to what extent, our purcteasing dollars find their way into the small, minority and woman-ownod husiness communities. We view our subcontracthg program as an important part of our sjoplier civersity program.

## Recommendation

2. Use national business dermoyraphics data as a lool when assessing diversity of its suppliers and idensifying market opportunities.

## Wtanagement agraas with this recommendation to the extent outined below.

Supplier Diversity at the Postal Service is the proact ve busiress process that seeks to "insure that no supplier is excluded from opportunities, or given preference, to compete on the basis of race, color, religion, sox, ago, or national orign. ${ }^{-1}$ This process underpins the policy of the Postal Service lo maintain a strong supplier base thatreflects the diversity of the American supplier community. Small, minority and woman-owned businesses are an important part of that supplier base. Purchase tearns curren:ly use various means to source suppliers, including minority and wonan-owned susinesses.

We believe use of the national business demographics data can be useful in top-level diagnoses. The data may also have some value in efforts to assess supplier diversity subcontracting plans .n some parlicular cases. The data is çute generic for $\lrcorner s e$ in fundamental sourcing, and our purchasirig professio'lals do have a variety of focused data bases they can more practically use for source identification. From a management or strategic level, we wil. use the census dala as a benchiseark to monitor overall perfarmaine.

[^8]
## APPENDIX 1

Supplementary Management Response To Recommendation 2
DIG Report CA-MA-02-DRAFT
Postal Service Supplier Demographics

As noted in the response above, the OIG's Advisory Report recornimended that the vice president, Purchasing and Materials "use national business demographics data as a tool when assessing diversity of is suppliers and identifying market opportunities."

## The Economic Census Data:

We agree that the Censts Bureau's material, drawn from the periodic "Economic Census," does provide a wealth: af information about the overal, business commurnity within the United States, and its overall composition. We agree that this information is valuable for top level analysis of our progrem and for general diagnoses. We are using it for those broac purposes.

We include, as an attachment, a summary of iaformation derived from the several repors the Census Burou published from the 1997 statistics, and the Irenc data they contein, crawn from using 1992 Economic Census data as a comparator.

For example, we can use the data to get a picture of publicly held versus privately held businesses and their relative "sharing of overall business revenues". We can see, in gross fashion, growlth in bulf nurnoers of firms and revernues From 1992 to 1997, brokerl dawn by business classification. Wie can see where geographic concentrations of firms, by ethnic owrorship. are doweloping. We can drill into the makeup of various industry seciors. These are all valuable data for general assessment and diegnostics.

However, it does not provide a particularly useful tool for our purchas ng professianals to use in "sourcing" for particular buys. Typically, but wit'ו some exceplions, oul buyers source nationally. In other words, they look for suppliers capable of me日ting our needs across the span of the nation. Our formal "buys" or solicitations are generaliy large and require financisl, lechnical, and
 preponderance of our purchas ng dollars. ${ }^{1}$ Notable exceptions can be found in construction activities, some road transporlation contracts, and, to some extent, "local" buys made with the purchase card ( $\mathbf{P}$-card). In these, there can often be a mare geographical (regional or local) focus, bu: even with the P-cards: much of the buying is dorie from national firms.

## The Census Bureau Data and Market Opportunities:

Ihe OIG corcluded thal the Census Bureau's national business demograp ic data could assist the Poslal Service in assessirg ils minorily-ownec end vorman-dumed supplier sepreseritation and fosier opportunities to maintar or increase revenues fron these sources. As noted above, we thlak there is general value In the Census Bureau data. We can use that informetion to some degree to assess rainority and woman-owned business representatior and participation in our supply chain. To use that dala ki "foster opportunities to maintain anc increase revenues fror: these sources" is tar more problematic, and probably does not lie with Purchasing and Materials. We do understand that our marketing and sales forces have made some focused attempts at identifying and addressing particular smal, arce mirority markels, but out :ole, in Purchásing and Materials, hes beer one of tangent al support.

[^9]That jeing said, we do understand and believe that the regerd he'c for the Postal Sorvice, overall, and witnin the minority and woman sectors of the marketplace, ean be improved for lessened) to some degree by whether or not we are viewed in those communities as supporting cross-cultural business opportunit:es. The extent of ef'ect that may have on our "market" : those commuritios is oxtromely difficult to assess, given our ubiquitous preserice everywhere in the United States.

Nevertheless, we think that our general reputation for promating supplier diversity has stood the Postal Service ir good stead. We receive a fair amount of recognition from external sources for the efficacy of our program. For example, in both 2000 and 2001, the Postal Service ranked high in an electronic survey of some $100,000 \mathrm{mr}$ roriלy and woman-owied firms asked to rate private soctor Fortune 100 companies and government agencies on how well they supporl cross-cultural business opportunities. The survey is conducted by DIV2000. Among the govemment agencies, we ranked second to the Small Business Administration) in 2000, ard sixth in 200".

Indeed, the analysis contained in the OlG's draft report indicated that minority-owned businesses, in FY 1999, received $3.49 \%$ of our purchasing dollars against that sectors $3.19 \%$ "share" of sutal nallonal revenues. Wioman-owned businesses, on the other hand, received $3.23 \%$ of our purchasing dollars as contrasted to WOBs $4.41 \%$ "star $\theta$ " of fotel national revenucs. ${ }^{2}$ The Ofe does not address subcontracting, or second tier diverse supplier usage, although it is an important plank in our overall supplier diversity program. We strive to enlist our prime suppliers so that they too, in turn, will promote supplier diversity within their own activities. To that end, we rectire many to provide subcontracting plans, and call for quaterly reports on supplier diversity achicwemont from most of our suppliers. This clearly auģments our efforts to insure that Poslal procurement dollars find their way to ali sectors of the business community.

## Our Supplier Base Compared To Supplier Census Data:

The OlG has also assessed the makeup of our supplier base, and comparec it to the makeup of the suppliers included in the National Demographics. To do this, they sought to identify the number of discrete suppliers we used during FY 1999. The number of minority, woman-owined. and total suppliers attributed to us by the OIG appears to us to be low, though we have not done the analysis for FY 1999. ${ }^{3}$

Futcdan"er lally, we to :ol believe the comparison to be apposite. A close look at the detail underlying the national demographic data, we believe, will make the point. We already noted the number of pubicly he c , foreigr-owned and non profit firms in the overall data, and the disproportionate "share" of revenues they command (see footnote 1). To dig a bit deeper, we find

[^10]that of the rema ring 20.4 million frms, gene:ally partnerships, sole proprietorships, and Subchapter $S$ corporations, only about $25 \%$ have any employees. Of tha: remaining number \{i.e., the approximately 5 million firms that do have employees), over $60 \%$ have fewer than five. The Cersus data breaks tuse ligures down by supplier sector (see at:achment, infra).

To look at it a different way, the average annual revenue of the 20.8 million firms was $\mathbf{5 8 3 1 , 5 0 0 ^ { * }}$. We have already seen that the relatively few publicly held. "oreign-ownod, and non-profit firms account tor more than half the total revenues. Average annual revenues for minority owned firms, (taken as a group) was $\$ 195,000$, while that of woman-owned firms was $\$ 151,000$. This data tell us that a great many firms in the Nationel Business Demographic Database are simply too small, generally, to serve dur needs.

## Supplier Diversity and Sourcing:

Under our approach to supplier diversity, and $n$ line with our congruent strategies to find and do business with the best while adoptiny supply chain matragenter: apobaches, we stress the Identifleation and examination of specific firms (inctuding minority are woman-owned firms). To that end, we provide buyers with aconss to supplier listirigs and cate bases of our own and from a broad variety of other sources such as that of the National Supplier Diversity Council (NMSDE). These listings and dala bases can provide our tiuyers with more detailed and focused informat on on particular suppliers than can be derived readily from the Census Bureau Data. We have promulgated a series of "best practices" for both individual buyers anc for buying organizations to assist them in their efforts to idenilify (and develup) capable firms.

## Summary:

All told, we certainly agree trat the data derived from the periodic Economic Census, compiled and distributged by the Census Bureau, is valuable. It provides an excellent top-level perspective of the composition and mix of suppliers within and throughout the United States. We can, and have begun, to use this informazion in overall diagnostics.

We also agree Ihat the Economic Census Data may well be useful in efforts to icerilify market opportunities. We believe that our marketing and sales organizations have used that and similar data for those purposes. Collaterally, we recognize that our repulation in the "outside world" for supporting multicultural opportunities in our purchasing activities and in promotimg supplier diversity, supports markel development in such sectors.

The value of this data is a loal far part.cular sourcing efforts to be problematic, and probably less effective than th:e methods we endeavor to use now.

[^0]:    ${ }^{1}$ United States Department of Commerce News Release dated July 12, 2001.
    ${ }^{2}$ United States Department of Commerce News Release dated April 4, 2001.
    ${ }^{3}$ Supplier Diversity Plan, Fiscal Years 1999-2003 dated January 1999.

[^1]:    ${ }^{4}$ Contract data included Supplies, Services, and Equipment Purchases; Facilities Purchases; Transportation Purchases (air, rail, water, and highway); and credit card purchases.

[^2]:    ${ }^{5}$ The 12 states included Washington, D.C.
    ${ }^{6}$ The 45 states included Washington, D.C.

[^3]:    ${ }^{7}$ This includes both businesses/dollars with no paid employees. In addition, detail data does not add to the total because of duplication of some businesses.
    ${ }^{8}$ Postal Service areas in existence as of FY 1999.
    ${ }^{9}$ County assignments were made based on Postal Service area with the larger number of ZIP Codes. When ZIP Code information was not available, county assignments were made based on geographic area and proximity to

[^4]:    ${ }^{10}$ Total number of suppliers does not include those suppliers classified as Nonprofit, Educational, National Institute for the Blind (NIB), National Institute for the Severely Handicapped (NISH), Federal Prison Industries or Foreign.
    ${ }^{11}$ For all purchasing areas except local purchases made by credit card, the total number of businesses and the total amount of Postal Service procurements across those businesses is based on commitment, and thus does not represent actual payments.
    ${ }^{12}$ The various Postal Service purchasing entities all used different means to classify business sectors (industrial areas). For example, there are approximately 600 commodity codes that can be used to classify supplies and services contracts. Thus, in order to compare Postal Service Supplier Demographics to National Business Demographics, we created a mapping of these supplies and services commodity codes to the standard sectors

[^5]:    * Postal Service areas in existence as of FY 1999.
    ** Includes Capital Metro Area.

[^6]:    * Postal Service areas in existence as of FY 1999.
    ** Includes Capital Metro Area.

[^7]:    * The Industrial Sector analyses do not include categories Agriculture, Finance, and Not Classified.

[^8]:    ${ }^{1}$ See "Supplier Diversity, Statement of Commitment"

[^9]:    ${ }^{1}$ Some 380,000 (less than $2 \%$ ) of the nearly 20.8 million firms in the United Slates are publldy' helc, foreign-owned or not for profit firms. Those firms account for wel, over ha f the total annalal revenues beirg received by the total number of firms.

[^10]:    ${ }^{2}$ We were told that these figures irclude Purch ase Card collars, and reflect Fy 1999 figures.
    Figures we reported for FY 1999, which do not inciude the P-card results, were somewhat higher, even after "correction" to reflect the doliars questioned by the OIG in Audil Reporl Number CA, AR-01-005. We had reported that $\$ 363.6$ Million hac gone to minority firms, anc $\$ 445.6$ Million had gone to Woman-owned firms in FY 1999, exclusive of P-Card figures.
    ${ }^{5}$ while we have nol done an analysis an FY 1999 suppliers to determine the discrele number by Gategory, the numbers of minority, woman-owned and total suppliors attributed to us by the OIG appears to us to be low. We began to use this metric at the end of (and for) FY 2001. For our 2001 analysis, we tabulated suppliers receiving contracts, or contract amendments involving money during the fiscal year. We're not sure that the methodology we used is comparable to that urderlying the OIGs ligures. For 2001, we rellect a tolal aclive supplier sase or some 25,600 discrete suppliers, with 2,900 classified as minority owned and 5,965 as woman-owned. Wie bolicve that the numbers have decreased somewheal over the past few years due to a significant decrease in comnitmenss and dje to our efforts to consolidate buys, in line with our Supply Chain Management stralegy. The FY 1999 numbers the IG posiulates incticate a total supplier base of 18,764 (exclusive of P-Card vendors), 1,636 minority suppliers, and 2,310 woman-owned firms. The computational approaches may be different fror trose we used for FY $2[101$,

[^11]:    ${ }^{4}$ Some 693,000 minority-owned firms, or 23\% of all minor ty-owned firms had revenues of $\$ 5,100$ or less. Similarly, approximately $1,631,000$ woman-owned firms, or $30 \%$ of all womanowned :irms had revenues of less than $\mathrm{S} 5,000$ /year.
